A guarterly bulletin issued by the Debt Management Unit

#### DEBT MANAGEMENT STRATEGY Uruguay awarded Best Sovereign Liability Management bv LatinFinance magazine in 2012

On January 17<sup>th</sup>, the financial magazine LatinFinance awarded the Republic of Uruguay Best Sovereign Liability Management, which consisted in launching a new benchmark UI Global Bond due 2028 for an equivalent of USD 2billion, a fixed price cash tender offer for various USD and Euro Bonds and an exchange of UI Global Bonds due 2018 into a reopening of the new UI Global 2028. "The award, selected by the editors of LatinFinance, is based on a variety of factors including the transaction's significance, strategic importance, innovation, groundbreaking qualities, market success as well its reception by peers and investors," said the magazine.

Once per year LatinFinance recognizes the achievement of the region's leading companies and sovereigns in bringing to market exceptional transactions as well as the outstanding work of the banks and law firms that operate across the Latin-American capital markets. "The operation allowed Uruguay to extend duration, de-dollarize its curve, reduce foreign currency and refinancing risk and provide liquidity to existing bonds. It also sets a template for other sovereigns to follow," added the magazine.

"We were able to increase the percentage of local currency, execute at a time of volatility in a scenario that was complicated for local currency issuance, and we stuck with our objectives," said Azucena Arbeleche, Director of Debt Management Unit at Uruguay's Finance Ministry to LatinFinance.

Mr. Christopher Gilfond from Citigroup; Mr. Taimur Ahmad from LatinFinance; Ms. Azucena Arbeleche Director of the Debt Management Unit of the Ministry of Finance in Uruguay; Mr. Matt Rietz and Mr. Juan Pablo Gallipoli from HSBC celebrate the award in January 17th, New York.

In December 2011, Uruguay launched a management transaction liability designed to deepen the de-dollarization path of the Central Government debt, to create a new UI benchmark bond and to continue reducing the rollover risk of the debt through a smoother profile of amortizations over time. The transaction was designed in three components. The first one was the issuance of USD1.3 billion equivalent through a new UI Global Benchmark Bond due 2028 with a coupon of 4.375%.

Next, Uruguay carried out a fixed price cash tender offer for various USD and Euro denominated bonds to purchase approximately USD1billion in market value bonds with final maturity between 2012 and 2036.

Finally, the Republic offered to exchange the outstanding 5% UI Global Bonds with maturity in 2018 into a reopening of the new Global UI due 2028 to improve the liquidity of the new bond and to diminish the amortizations in the year 2018. Citigroup and HSBC acted as Dealer Managers in this transaction.

#### ECONOMIC PERSPECTIVES Encouraging picture for investment will bring more sustained growth

In early December, the economic authorities summarized the deep changes that the Uruguayan economy has been registering in recent years: higher levels of productive investment. which have generated productivity gains in several key areas. Based on these arguments the ministry of Finance, Mr. Fernando Lorenzo, concluded that Uruguay is on a path of structural change that brings more sustained growth and better quality jobs. Lorenzo pointed out that total investment will surpass 21% of GDP in 2012 and achieve almost 25% over GDP in 2015 (including 4pp of GDP in mining and oil projects). In the period 2005 - 2011, total investment averaged 18.7% of GDP and the economy grew at a 5.8% annual rate of which 2.8% was explained by an increase in the total factor productivity.

#### REAL SECTOR

Economy grew 3% in 2012Q3; official target of 4% for year 2012 continues being on track

The Uruguayan economy accelerated the path of growth in 2012Q3 achieving an increase of 3% from a year earlier and 1.2% from the previous quarter. This performance was better than the market expectation and sets a "floor" of real growth of 4% for 2012, in line with official estimations (annual data of year 2012 will be published in next March).

In 2012Q3 domestic demand continued underpinning real growth with an increase of 5.8% in general consumption and 12.5% in fixed investment. As real imports of goods

and services registered a high real growth compared with exports, 17.8% and 5.7% respectively, there was a negative effect of external net sales over GDP growth.

Measured by sector, in turn, Transport, Storage and Communications sectors continued showing a promising performance in the third quarter of last year with an expansion of 1.8% (sar) and 7.1% on an interannual basis due to the growth in data services and mobile telephony services. On the other hand, transport and storage services remained stable.

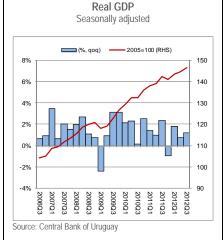

Also, Manufacturing Industry posted an increase of 0.5% compared with the previous guarter and of 2.6% with the same period of 2011, as well. The secondary sector, which will grow 3% in real terms in 2012 according to the official estimation, foresees a significant increase in investment during the current year. Along this line, and according to a recent survey published by the Industry Association, industrial companies planned to increase by 10% the investment level in 2013 -measured in USD current terms-compared with the previous year. Investment in machinery and equipment will increase by 28% while investment in building will contract 17%.

The Other Activities sector increased 2.2% (sar) and 3.8% in 2012Q3 underpinned by the expansion in health services and general services for companies.

Despite the Construction sector's decreasing 1.6% on a seasonally adjusted basis, the sector expanded 12.0% in 2012Q3 compared with same period of 2011 due to the dynamism in both private and public sector. In the public sector this expansion was driven by the construction of a second pulp mill –Montes del Plata– and the increase in public infrastructure in ports and in some state owned utilities companies.

Commerce, Restaurants and Hotels decreased slightly 0.1% in seasonally terms but registered a real expansion of

2.4% in 20112Q3 compared with one year before. This highlights the increase in commerce activities, which was partially offset by a decrease in restaurants and hotel services.

In contrast, Primary Activities contracted both in seasonal and in interannual terms with a decrease of 0.3% and 1.9%, respectively. Within this sector, results were mixed. Agricultural production registered an important contraction due to the fall in wheat production while livestock production increased significantly. The Uruguayan Government expects this sector to grow slightly 0.2% in 2012 and a recovery of 3.9% in the current year.

The Electricity, Gas and Water sector reflected the severe drought the Uruguayan economy experienced in the first quarter of last year and the normalization of rainfall since 2012Q3. Consequently, while this sector expanded 73% (sar), it decreased 37% compared with the same quarter of 2011.

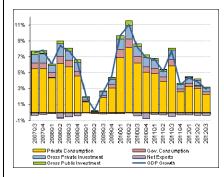

On the expenditure side, internal demand grew 9.2%, in line with overall income growth. However, exports and capital formation grew once again above this figure. Exports of goods and services increased 17.5% in real terms, while gross fixed capital formation grew 25.6%. Government expenditures only expanded 1.0%, in line with the conservative profile of the fiscal stance.

Increase in final consumption expenditure (5.8% yoy) was due primarily to the increase in Private Consumption (5.7%). Even though Public Consumption increased at a higher rate, 6.2%, its weight on GDP is significantly lower than private consumption.

Total investment grew 12.5% in real terms in 2012Q3. The main drivers were the construction sector and imports of machinery and equipment.

After remaining unchanged in 2012Q2, exports of goods and services increased 5.7% in real terms in the next quarter driven by goods exports. In effect, while the former expanded 9.7% –explained by an increase in soybean and beef external sales–, service exports decreased 10.3% explained by the contraction of transport and tourists services.

Contribution to GDP Growth by Expenditure On a Quarterly Basis

Source: Central Bank of Uruguay

Upon learning the official growth numbers for the third quarter, private analysts revised their growth forecasts for 2012 upward to 3.7% and downward to 3.9% for 2013. The IMF maintained its forecast in 3.5% of GDP growth for 2012 and 4.0% for the current year.

Some leading indicators foresee an expansion during the last quarter of 2012. According to the Leading Activity Index (ILC) elaborated by the private think tank Ceres, there was an increase of 0.5% in October. The expansion of this index was fairly generalized, as 63% of the variables that compose the ILC posted positive readings.

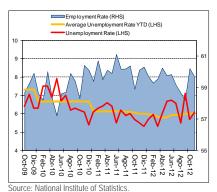

Another indicator that anticipates a good performance in 2012Q3 is tax collection, with an increase of 7.8% in real terms in

October 2012 over the same month of last year. Excluding public enterprises, the collection showed a significantly higher performance, with an increase of 9.8% in the tenth month of last year.

Industrial Production, in turn, increased 1.0% and 2.0% in October and November respectively, compared with the same months of last year.

The average unemployment rate remained at the historically low levels of 6.1% in the period January - November of 2012 compared with the similar period of the previous year.

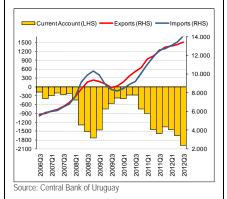

#### EXTERNAL SECTOR

FDI inflows continues comfortably financing a higher current account deficit

The merchandise balance, measured as the difference between exports and imports goods on a FOB basis, closed the third quarter of the last year in USD 1.9billion (4% of GDP). However, the significant growth in service exports, especially those related with tourist services, permitted the reduction of the overall trade balance deficit to USD 659million or 1.4% of GDP.

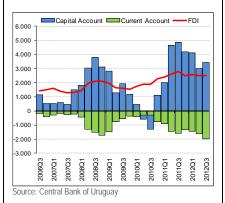

In turn, the increase in dividend transfers made by local companies to abroad, led to a widening in the CA deficit to 4.1% of GDP in the third quarter of 2012 from 3.3% of GDP of the previous quarter.

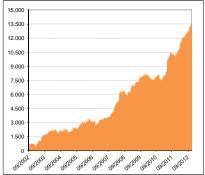

Nevertheless, the strong Foreign Direct Investment (FDI) inflows the Uruguayan economy continues receiving, not only has been comfortably financing the CA deficit but has also allowed significant accumulation of international reserves of the Central Bank. In this line, FDI stood at USD 2.5billion in the year ended in 2012Q3, representing 5.2% of GDP. In the last 10 years the FDI averaged 5.1% of GDP annually –one of the highest figure in LATAM– while the CA registered a deficit of 1.9% of GDP.

Capital, Current Account and FDI Million of USD

On the other hand, the international reserves of the CB continued rising in 2012, reaching a new record of USD13.6 billion. The reserves increased by USD3.3 billion in the last year.

External Reserve Assets Million of USD

Source: Central Bank of Uruguay

#### PUBLIC SECTOR Fiscal deficit rose at 2.8% of GDP as of the year ended in November

The overall deficit of the consolidated public sector for the year ended in November 2012 stood at 2.8% of GDP.

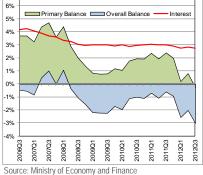

Last year the Uruguayan Government faced some unexpected transitory expenditures, which lifted the fiscal deficit. The most important factor that affected the public accounts was a severe drought registered in the first half of last year, which caused deterioration in the fiscal result of around 1.2% of GDP.

In second term, the Uruguayan Government agreed to end a legal dispute with the former international shareholders of the Banco Comercial -Chemical Overseas Holdings, Credit Suisse y Dresdner Lateinamerika- by paying USD 120million in connection with the liquidation that took place as a result of the financial crisis of 2002.

In third place, other unexpected expenditures such as settlement payments from the liquidation of PLUNA airline (of which 25% equity belonged to the government) impacted in the fiscal balance.

Finally, a minor part of the increase in the fiscal deficit is explained by larger investment execution, in particularly, at the Central Administration level. The revenues of the Non-Financial Public Sector represented 28.8% of GDP in the rolling year ending in November 2012, which implied an increase of 0.1% compared with the previous month. While revenues from the CG and the social security institute (BPS) remained almost unchanged, the current primary result of public enterprises posted an increase of 0.1% of GDP due to better than expected performance of the stateowned oil and electricity companies, ANCAP and UTE, respectively.

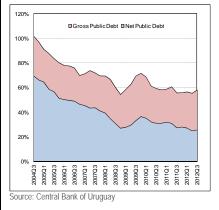

The interest bill on public debt, in turn, achieved 2.6% of GDP, falling 0.4pps of GDP from the previous year.

#### PUBLIC DEBT Gross debt at 58% of GDP in 2012Q3

Total consolidated public debt amounted to the equivalent of USD27.8 billion at 2012Q3, representing 58.1% of GDP. The consolidated net public debt totaled USD12.4 billion, equivalent to 25.8% of GDP. Measured in terms of GDP, the total net debt increased 0.8% compared with the previous quarter while decreased 1.8% respect to 2011Q3.

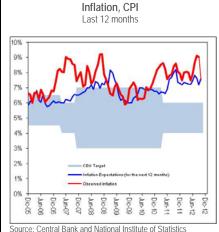

INFLATION & MONETARY INDICATORS Central Bank increased its target rate 25bps to 9.25% in December; annual inflation closed at 7.48% in last year

On 28<sup>th</sup> December the Monetary Policy Committee (MPC) of the Central Bank raised its benchmark rate 25 basis points (bps) to 9.25%. "Inflation continues to be the key risk to the Uruguayan economy," the MPC said in a statement. "If the inflationary threat isn't decidedly dealt with, we risk interrupting or partially reversing the gains made in terms of growth, competitiveness, poverty reduction and distribution of wealth," continued the release.

This increase was the second time in last year and reaffirms the strong commitment of the CB to bring down inflation into the official target.

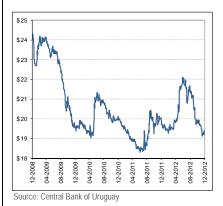

After this interest hike, the National Bureau of Statistics informed that a consumer price decreased by 0.73% in December while in year 2012 inflation closed at 7.48%. The deflation of last month was mainly driven by the "housing and electricity sector," posting a decrease of 6% and having an incidence of -0.86% in the consumer price index, followed by "transport sector" with a deflation of 0.4% (with an impact of 0.04% in CPI).

Private analysts surveyed by the CB forecasted an inflation of 7.6% for this year, according to December bulletin.

Due to the acceleration of inflation since the second half of 2012 the MPC had lifted its benchmark rate in another 25bps to 9.0% in the ordinary meeting of September. The five-member committee of the MPC meets on a quarterly basis, with the next meeting scheduled for March 2013.

FX Market On a daily basis

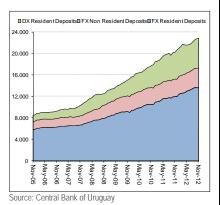

The nominal FX Uruguayan Peso has been appreciating since early August and closed 2012 at UYU19.4 per USD compared with UYU19.9 per USD of one year before.

Private analysts forecast a nominal exchange rate of UYU20.6 per USD at the end of 2013, according to the survey of CB reported in December.

On August 15<sup>th</sup>, 2012, CB announced a reserve requirement equivalent to 40% of incremental purchases by non-residents of securities issued by this institution. This decision does not affect Treasury Notes. The purpose of this measure was to manage local liquidity and to prevent any distortions in the money market related to growing FX capital inflows. Foreign capital inflows increased after Uruguay earned its second investment-grade rating by Moody's in July, 2012.

#### Total Deposits in the Banking System Million of USD

The overall banking sector continued to increase deposits. As of November 2012, total deposits amounted USD 22.8billion, representing an increase of 13% compared with one year before. Residents' foreign currency deposits increased to USD 13.7billion, compared to USD 12billion one year before. In turn, residents' local currency deposits rose to USD 5.5billion, growing USD 500million with respect to November, 2011. Non-residents' deposits totaled USD 3.7billion in this period, compared to USD 3.3billion of the previous year.

#### RECENT DEVELOPMENTS Transparency International: Uruguay continued exhibiting significant low levels of corruption

Uruguay, together with Chile, were the best-ranked LATAM countries in the latest edition of the "Corruption Perceptions Index" (CPI) released in December, by the non-governmental corruption watchdog Transparency International. Both countries achieved 20<sup>th</sup> place in the list over 176 countries.

#### LATAM Corruption Index in 2012

Uruguay	20
Chile	20
Brazil	69
Panama	83
Peru	83
Colombia	94
Argentina	102
Bolivia	105
Mexico	105
Ecuador	118
Paraguay	150
Venezuela	165

Source: Transparency International

In 2011, Uruguay placed position  $25^{th}$  of a total of 183 countries, positioning in the second place in LATAM behind Chile.

The CPI ranks 176 countries by their perceived levels of domestic corruption in the public sector and is the world's most credible measure of domestic, public sector corruption.

## First PPP projects will begin to be operational during this current year

The Uruguayan Government has launched the first Public - Private -Partnerships (PPP) project for building and managing a jail for the next 20 years and a net present value (NVP) of the total investment equivalent to -including USD218million USD 73million in the phase of construction. Under the PPP scheme, delimited in a Law that Congress passed last year, the winner will be in charge of designing, building and financing the jail as well as to the maintenance and replacement services, housekeeping, meals, laundry, etc. The Uruguayan Government, in turn, has to ensure the services, safety, health and rehabilitation of prisoners.

Also, Uruguay announced a second PPP project for 2013Q2. It will be related with the rehabilitation and development of two major roadways for transporting wood and grains and will demand an estimated investment of USD 280million.

For the medium term projects in the pipeline are: rehabilitation of railroad (NPV of USD 120million); rehabilitation of six roadways for heavy transport (NPV of USD 1billion).

Finally, for 2014 the Government will allocate a new deep port in the east zone of the country with a total investment of up USD 1billion. In early January, the Congress passed a new law establishing the geographical location of the new port: almost 250km east of the country in the Department of Rocha with access to the Atlantic Ocean. Preliminary studies show that demand volumes are sufficient to initiate the development of this new port for transporting bulk cargo (grains and minerals), estimated in 50million tons per year. This new port could generate savings for up to 50% in logistics costs for certain freight flows in the region. Forty two companies from 13 countries expressed interest in this project.

In July 2011, Congress approved legislation for PPP projects. The new legal framework establishes that total liabilities (including contingent ones) calculated as the NPV of investments held by the PPP law may not exceed 7% of GDP of the previous year. Meanwhile, annual commitments with private contractors originated by PPP contracts may not exceed five per thousand of GDP of the previous year.

#### IDB supports Uruguay in developing new wind power generation and a combined-cycle-gas-power plant

The Inter-American Development Bank (IDB) announced two loans for USD 108million to finance the construction of two wind farms that are expected to generate 115Megawatts (MW). "These projects will be the first two wind farms to be financed by the IDB that are developed within the program launched by UTE, the state-owned electricity company, to promote private sector participation in the renewable energy sector," said Jean-Marc Aboussouan, Chief of the Infrastructure Division at the Structured and Corporate Finance Department.

Currently the installed power generation capacity of Uruguay is approximately 2,600MW and the real demand is expected to grow at 4% on an annual basis in the next three years.

Uruguay is betting for incorporating new renewable sources of energy in the coming years in order to diversify its energy matrix and reduce its dependence on hydroelectric generation which, during the dry season, forces the country to boost electricity generation from fossil fuels and makes it vulnerable to international oil price fluctuations. According to that plan renewable sources in 2015 will weigh in more than 50% of the global energy matrix of Uruguay, becoming one of the world's leading wind power producers. This objective will be achieved through the incorporation of wind power generation starting in 45MW in 2012; 193MW in 2013; 972MW in 2014 and 1,152MW in 2015.Also, with the development of biomass projects up to 300MW in 2015; the construction of a combined cycle plant (crude and natural gas) for producing additional 530MW and the building of a re-gasification plant known as *Punta del Tigre "B"*- for supplying 10million m3 of natural gas on a daily basis. Total investment for building this plant is USD 741million. The public company UTE will provide financing for 39.3%; the IDB will share 27%; the Andean Development Corporation 24.3% and the German development bank KfW 9.4%.

In sum, the total amount of investment required for incorporating all these sources of clean sources of energy will range between USD 2.7billion and USD 3.3billion.

Additionally, October the last Uruguayan authorities signed an offshore oil contract with four international companies -British Petroleum and British Gas, Total and Tullow Oil- which committed to invest up to USD 1.6billion in the exploration and production of oil in the Uruguayan coast in 2013-2015.

### Punta del Este continues attracting real estate projects

The Trump Brand and YY Development Group announced the development of Trump Tower in the famous resort *Punta del Este.* The investment for the new luxury residential tower will amount USD 100million for building a 129 ocean-view residences with a state-ofthe-art amenities unprecedented in the South American continent. It will also provide access to destination highlights, including premier hotels, fine dining, culture and nightlife, golf and recreation, and luxury shopping.

The new Trump Tower project in Punta del Este

"When I first visited *Punta del Este*, I was overwhelmed by its beauty, cultural sophistication and exclusivity," said Eric Trump a family member of this holding group. "We are incredibly excited to see Trump Tower Punta del Este become the finest luxury building in all of South America".
